SUMMARY

Full-stack software engineer with 2 years of experience building production backend systems and user-facing web applications. Strong background in Java/Spring Boot, React/TypeScript, cloud-native CI/CD, and distributed systems. Proven track record in improving system reliability, developer productivity, and delivery speed.

EDUCATION

Vellore Institute of Technology

B.Tech. in Computer Science Engineering (CGPA: 9.68)

Vellore, India

2020 – 2024

EXPERIENCE

Arcesium (D.E. Shaw Group)

Senior Software Engineer – API Experience Team

Bengaluru, India

Jan 2026 – Present

- Leading API platform initiatives across Java, Python, and C#, focused on developer experience, consistency, and reliability.

Software Development Engineer

July 2024 – Dec 2025

- Standardized DateTime (de)serialization to UTC epoch milliseconds across Java, Python, and C#, reducing timestamp defects by 40%.
- Built LLM-based unit test generation agent using Amazon Bedrock and Claude Agent SDK, cutting manual test effort by 70% across SDKs.
- Built a distributed rate limiter using Hazelcast and Bucket4j, stabilizing p99 latency under abusive traffic spikes.
- Automated documentation validation and deployment via GitLab CI, reducing doc-related regressions to near zero.

SDE Intern

Jan 2024 – June 2024

- Reduced CI/CD pipeline time by 70% through parallelization and GitLab CI workflow redesign.
- Implemented cross-language SDK contract validation across Java, .NET, and Python.

Summer Intern

Summer 2023

- Built a full-stack internal tool using React (TypeScript), Spring Boot, and Node.js.

PROJECTS

Mock Server Generator | Node.js, OpenAPI, JSON Schema Faker

- Developed a CLI tool to instantly generate stateful mock servers from OpenAPI specifications featuring hot-reloading and traffic recording/replay capabilities.
- Engineered dynamic schema-based response generation utilizing smart field hints and in-memory stateful CRUD operations for realistic API simulation.
- Implemented header-based error and latency injection, alongside a minimal UI inspector for real-time request logging and state visualization.

UML Generator from Natural Language | Python, LangChain, PlantUML

- Created a Python tool using LangChain to convert descriptive text into UML diagrams via PlantUML.
- Published as a reusable Python package on PyPI.

Spring Cron Expression Translator | TypeScript, NPM

- Developed a TypeScript package to convert Spring Cron expressions into human-readable text.
- Designed for frontend integration and edge-case correctness.

TECHNICAL SKILLS

Languages: Java, Python, C#, TypeScript

Frontend: React, Next.js

Backend: Spring Boot, Node.js, Express

Databases: PostgreSQL, MySQL, MongoDB

DevOps & Cloud: Docker, Kubernetes, GitLab CI/CD

Other: REST API design, Distributed backend systems, SDK & Developer tooling
